Lesson 3

Earth Can Change Quickly

Fill in the blanks. Use the words from the box.

Vocabulary

earthquake

landslides

volcano

1. When the Earth's crust shifts and the ground shakes, it is called an _____.

2. Sometimes earthquakes cause _____.

3. When hot, melted rock erupts through a hole in Earth's surface and builds up, it forms a _____.

Circle the letter of the best answer.

4. What is lava?

a. melted rock

b. melted butter

c. hot oil

d. hot water

Draw a model of a volcano.

Chapter 5

Weather and Earth Changes

Circle the letter of the best answer.

1. What does heat do to water?

a. freezes

b. evaporates

c. sweetens

d. salts

2. What is water that goes into the air called?

a. ice

b. fresh water

c. water vapor

d. hot

3. What does cool air do to water vapor?

a. boils

b. evaporates

c. freshens

d. condenses

4. What are rain, snow, and hail called?

a. salt

b. fresh

c. precipitation

d. evaporation

Chapter 6

Earth Yesterday and Today

Use a graphic organizer to compare dinosaurs to animals living today.

© Macmillan/McGraw-Hill

Name _____

Compare and Contrast

Use the graphic organizer to compare living things from the past to living things of today.

Compare a fossil from the chapter to something that is living today.

1. Describe It: _____

2. Compare It: _____

3. Relate It: _____

4. How does organizing the information help you understand dinosaurs better? _____

Name _____

Chapter
Reading Skill
Chapter 6

Compare and Contrast

Read Lesson 6. Compare and contrast what you know about how living things become extinct and how their becoming extinct can be prevented.

5. How do things become extinct?

6. Compare what happened a long time ago to what is happening today.

7. What can you do to keep more living things from becoming extinct?

8. How do you know that people can help animals and plants from becoming extinct?

Clues in Rocks

Use your book to help you fill in the blanks.

What are fossils?

1. _____ are what is left of living things from the past.
2. Some fossils are prints of _____ or animals.
3. Other fossils are _____ of things that were once living.
4. These parts can be _____ or teeth.
5. Fossils can also be _____, tracks, or nests that animals left behind.
6. Many fossils are found in _____.

What are fossils?

7. A fossil may even be a whole _____ or plant trapped and saved in ice, tar, or amber.
8. Amber is hardened _____ sap.

How are fossils formed?

9. Many fossils form when _____ things are buried.
10. Most fossils are found in _____ that form very slowly in layers.
11. _____ can tell how old a fossil is when they know the age of the rock layer it is in.

Lesson 4

Clues in Rocks

Vocabulary

amber

infer

fossils

Fill in the blanks. Use the words from the box.

Some _____ are prints of plants or animals.
Other _____ are parts of things that were
once living. These parts can be bones or teeth. When you
see a leaf print in a rock, you can _____
it is a fossil. You know that the rock is old and that the leaf
print has been there a long time. A fossil may even be a
whole animal or plant trapped and saved in ice, tar, or
_____. Amber is hardened tree sap.

Putting the Clues Together

Use your book to help you fill in the blanks.

How do scientists work with fossils?

1. _____ are scientists who study things that lived long ago.
2. Scientists put together a dinosaur _____, or a full set of bones.
3. Skeletons help scientists learn about _____.

What clues do scientists get from animals today?

4. Scientists use what they know about _____ today.
5. They compare _____ bones to the bones of living animals.

What clues do scientists get from animals today?

6. Scientists compare fossil teeth to the teeth of animals today. This helps scientists figure out what dinosaurs

_____.

7. This helps them figure out how the animals may have lived and found _____.

How did dinosaurs live?

8. Some dinosaurs lived on _____.

9. Some dinosaurs _____.

10. Fossil footprints show that some dinosaurs lived in

_____.

11. Some dinosaurs laid _____.

Name _____

Putting the Clues Together

Follow the clues to tell about dinosaurs.

Use the phrases in the boxes. Use each phrase one time.

dinosaurs

Fill in the blanks. Use the words from the box.

No one knows for sure what _____
were like. So scientists use what they know about animals
today. Scientists who find and study fossils are called
_____. The paleontologists compare fossil
bones to the bones of living animals. By comparing the
_____ of dinosaurs to today's animals,
scientists learn how animals lived long ago.

Life on Earth Changes

Use your book to help you fill in the blanks.

Why do living things become extinct?

1. When something is _____, it has died out.
2. That means none of its kind is _____ anywhere on Earth.
3. Animals become extinct if they can not get the food, water, or _____ they need.
4. Many times _____ are the cause.
5. People _____ habitats by cutting down forests and building on land where animals make their homes.
6. People also _____ animals.

What living things are endangered?

7. When living things are _____, they are in danger of becoming extinct.
8. Today it is against the law to _____ an endangered animal or plant.
9. We can _____ these animals and plants by keeping the places where they live safe and clean.
10. Some plants and animals have come back from near _____.
11. Some animals, such as the American _____, the bald eagle, and the humpback whale are growing in numbers.
12. This is because people have tried to keep the _____ of these animals safe.
13. People have also stopped _____ them.
