Earth Yesterday and Today

Circle the letter of the best answer.

1. What is a fossil?

- a. a book with pictures
- b. a print in rock from long ago
- c. a photo magazine
- d. a living plant

2. What is a paleontologist?

- a. a fossil
- b. a scientist who studies fossils
- c. a habitat
- d. a skeleton of dinosaurs

3. What is a skeleton?

- a. earthquake
- b. scientist
- c. fossil
- d. full set of bones

4. What does extinct mean?

- a. endangered
- b. alive
- c. died out
- d. a fire

Name _____

Chapter 6

5. What does endangered mean?
- a. no shelter
 - b. in danger of frost
 - c. no habitat
 - d. in danger of becoming extinct
6. What are animal prints preserved from the past called?
- a. fossils
 - b. extinct
 - c. endangered
 - d. skeleton
7. Which animal listed below is extinct?
- a. alligator
 - b. lizard
 - c. humpback whale
 - d. triceratops
8. What kind of scientist studies fossils?
- a. archaeologist
 - b. anthropologist
 - c. paleontologist
 - d. sociologist

Chapter Organizer

Chapter 7

The Sun and Earth

You can use a K-W-L Chart when you study topics like the Sun and Earth. K-W-L charts help you organize what you already know, what information you want to know, and what information you learn by studying a new topic.

Before reading Chapter 7, fill in the first two columns of this KWL chart. In the first column, write what you already know about day, night and seasons. In the second column, write what you hope to learn in this chapter. When you have finished Chapter 7, complete the third column to show what you learned.

What I Know	What I Want to Know	What I Learned

© Macmillan/McGraw-Hill

Cause and Effect

Read each cause below. Use what you already know or what you learn in Chapter 7 to find the effect. Circle the effect.

1. **Cause:** As Earth rotates, the Sun shines on it.

Effect: A. The Sun gives Earth light and heat.

B. There is an axis from the North Pole to the South Pole.

C. The Sun is the closest star to Earth.

2. **Cause:** As Earth rotates, the Sun only lights half of Earth at a time.

Effect: D. The Sun rises in the east and sets in the west.

E. It takes 24 hours for Earth to rotate.

F. That is why we have day and night.

3. **Cause:** As Earth orbits the Sun, different parts of Earth tilt toward the Sun.

Effect: A. This causes the seasons to change.

B. It takes 365 days for Earth to orbit the Sun.

C. There are four seasons.

4. **Cause:** When our part of Earth tilts away from the Sun, we get less light and heat.

Effect: D. We have summer.

E. We have winter.

F. We have day and night.

5. **Cause:** When our part of Earth tilts toward the Sun, we get more light and heat.

Effect: A. We have summer.

B. We have winter.

C. We have day and night.

Cause and Effect

A **cause** is something that happens, or an action. An **effect** is the result of that action.

Read the causes. Draw a line to match the cause with the likely effect.

CAUSE

EFFECT

- | | |
|---|---|
| 1. The dog stood up on his hind legs and begged for a treat. | A. He ran after it and tried to catch it. |
| 2. The cat saw the mouse scamper across the floor. | B. The owner gave him a tasty bone. |
| 3. The bird pecked at the ground. | C. It found a slippery worm to eat. |
| 4. The dolphin jumped through the hoop while the crowd cheered. | D. The trainer rewarded her with a big, juicy fish. |
| <hr/> | |
| 5. The boy ate too much candy. | E. Her stomach growled all morning. |
| 6. The girl skipped breakfast. | F. He got a bad stomach ache. |
| 7. The alarm clock did not ring at 6:30. | G. We couldn't sleep at all. |
| 8. The loud noise continued all night. | H. We overslept. |

Seasons

Use your book to help you fill in the blanks.

What causes the seasons?

1. As Earth rotates, it also moves in an _____ around the Sun.
2. An orbit is the _____ an object takes as it moves around another object.
3. It takes Earth _____ days, or one year, to orbit the Sun.
4. As Earth orbits the Sun, different parts of Earth are tilted _____ the Sun.
5. This causes the _____ to change.

Why do seasons change?

6. When we have winter, our part of Earth tilts
_____ from the Sun.
7. When sunlight hits our part of Earth on a
_____ our part of Earth gets less light
and heat.
8. When we have summer, our part of Earth tilts
_____ the Sun.
9. When the Sun is high in the sky, our part of Earth gets
_____ light and heat.

What are seasons like in other places?

10. The equator separates the northern part of Earth from the
_____ part.
11. Places near the _____ have the same
weather most of the year.

Lesson 2

Seasons

Fill in the blanks. Use the words in the box.

Vocabulary

orbit

equator

seasons

As Earth orbits the Sun, different parts of Earth are tilted toward the Sun. This causes the _____ to change.

It takes Earth 365 days, or one year, to _____ the Sun. Places near the _____ have the same weather most of the year. This is because the Sun is high in the sky every day at the equator.

The Sun and Earth

Circle the letter of the best answer.

1. What is the star called that gives Earth its light and warmth?
 - a. Mars
 - b. the Sun
 - c. the Moon
 - d. Venus

2. What is the imaginary line that goes from the North Pole to the South Pole?
 - a. rotate
 - b. pole
 - c. axis
 - d. orbit

3. What does Earth do when it spins around its axis?
 - a. slants
 - b. tilts
 - c. slides
 - d. rotates

4. When we have summer our part of Earth tilts in what direction?
 - a. away from the Sun
 - b. toward the equator
 - c. toward the Sun
 - d. away from the equator

Circle the letter of the best answer.

5. When sunlight hits our part of Earth on a slant, what season is it?

a. summer

b. winter

c. fall

d. spring

6. What is the imaginary line called that separates the northern part of Earth from the southern part?

a. equator

b. axis

c. North Pole

d. South Pole

7. What is the path around the Sun called that takes the Earth 365 days to complete?

a. axis

b. season

c. equator

d. orbit

Name _____

Sequence of Events

The **sequence of events** is the order in which things happen.

Look at the pictures. Number the pictures to show the order in which the events took place.

Now complete the sentences below to describe what is happening in the pictures.

First, _____

Next, _____

Then, _____

After that, _____

Finally, _____

Name _____

Sequence of Events

It is important to follow the **sequence of events** when you are reading instructions.

Whoever wrote this recipe for chocolate brownies was really mixed up! Use the clue words to help you put the steps in the right order. Then, copy the steps into the boxes to make the recipe correct.

- _____ When they are finished, take the brownies out of the oven.
- _____ Then, mix all the ingredients together.
- _____ Finally, share the brownies with your family and friends!
- _____ Before you begin, gather the ingredients.
- _____ After that, put the pan in the oven and bake the brownies.
- _____ Next, pour the mixed ingredients into a pan.
