Matter

Complete this chart by filling in the blanks.

States of Matter — Water	
solid	_____
_____	water
gas	_____

Draw Conclusions

You can draw conclusions from what you read.

Read the story. Draw a conclusion about what happened.

You have a large balloon that floats in the air. In your warm house, the balloon floats up. You take the balloon outside. It is cold outside. Your balloon becomes smaller. It doesn't float up very well. Back in the warm house, your balloon gets bigger. It starts to float up again.

1. What makes the balloon float? _____

2. Can heat change the shape of gas? _____

3. Draw a conclusion about a gas in warm air.

4. Draw a conclusion about a gas in cold air.

Draw Conclusions

You can draw conclusions from what you read.

Read the story. Draw a conclusion about what happened.

You and your dad are baking cookies.
You mix the butter, eggs, sugar, and vanilla.
Your dad mixes the flour, salt, and baking powder. You mix the two bowls together.
You add chocolate chips. You put the cookie dough on a cookie sheet. Your dad puts the cookies into a hot oven. Soon you have warm cookies.

1. What did you put in your cookie dough mixture?

2. Is the cookie dough mixture a physical or chemical change? _____

3. Did the cookies change in the oven? _____

4. The cookie dough changed into baked cookies. Draw a conclusion about the change.

Three States of Matter

Use your book to help you fill in the blanks.

What is a solid?

1. There are three different states of _____.
2. One state of matter is a _____.
3. Like all matter, a solid takes up space and has _____.
4. But only a solid has a _____ of its own.
5. You can measure the mass and the shape of a _____.

What is a liquid?

6. Another state of matter is _____.
7. A liquid takes up space and has _____.

Name _____

Lesson Outline

Lesson 2

8. A liquid does not have a _____ of its own.
9. It takes the shape of its _____.
10. Milk, juice, and water are all _____.
11. The amount of space that something takes up is called the _____.

What is a gas?

12. The third state of matter is a _____.
13. It takes up _____ and has mass.
14. Heat can change the _____ of gas.
15. When gas is heated, it _____, or gets bigger.
16. When gas is cooled, it _____, or shrinks.

Changing Matter

Use your book to help you fill in the blanks.

What is physical change?

1. Matter may _____ in different ways.
2. You can change the _____ or shape of matter.
3. This is called a _____.
4. When you only change the shape of matter, its _____ stays the same.
5. You can also change matter by _____ it.
6. A mixture is something made up of two or more _____ things.
7. Mixing is a _____ change.

What is chemical change?

8. Sometimes matter can change into different kinds of _____.
9. Once matter goes through a _____, it is not the same as it was before.
10. _____ can change the color or shape of a fruit.
11. An apple will turn _____.
12. An orange will _____ out.
13. Water and air can cause iron to _____, but plastic will not change.

Matter

Circle the letter of the best answer.

1. What are all things made of?

a. dirt

b. matter

c. soil

d. glass

2. What does all matter have?

a. smell

b. sunshine

c. mass

d. home

3. What is something called that tells you about an object?

a. direction

b. path

c. cold

d. property

4. What measures how warm something is?

a. temperature

b. matter

c. mass

d. pole

Cause and Effect

A cause is something that happens. An effect is the result.

Read each cause below. Circle the effect.

1. **Cause:** A potter puts a clay pot in a special oven.

What happens?

Effect

- a. The clay disappears.
- b. The clay becomes liquid.
- c. The clay freezes.
- d. The clay becomes a different kind of matter.

2. **Cause:** Light hits a mirror that is not flat, but wavy.

Effect

- a. You look the same as usual.
- b. You don't have a reflection.
- c. You can see through the mirror.
- d. Your reflection looks funny.

3. **Cause:** What would happen without sunlight?

Effect

- a. Earth would get warmer.
- b. Nothing would be able to live on Earth.
- c. The dinosaurs would return.
- d. The moon would still shine.

Cause and Effect

A cause is something that happens. An effect is the result.

Read each cause below. Circle the effect.

1. **Cause:** The air is vibrating around you.

Effect

- a. You see rain.
- b. You feel hot.
- c. You hear sound.
- d. You smell food.

2. **Cause:** You hit the biggest bar on a xylophone. What do you hear?

Effect

- a. A low sound
- b. A high sound
- c. No sound
- d. Several different sounds

3. **Cause:** Someone knocks on your desk. It sounds louder when you put your ear on your desk.

Effect

- a. The air is vibrating faster.
- b. Your ear is deaf.
- c. The wood is not vibrating.
- d. The wood vibrates directly on your ear.

Lesson 4

Heat

Use your book to help you fill in the blanks.

How can heat change matter?

1. Energy is the power to make _____
move or change.
2. One kind of energy is _____.
3. Taking away heat can make something
_____.
4. Adding heat can make something _____
or boil.
5. Heat causes the solid ice to melt, or become
_____.
6. When water gets very hot, it boils. Then the liquid
becomes a _____.

Name _____
